

AgriFlow AI – Complete UI/UX Flow (Redesigned)

Design Philosophy

The application is designed around **One AI Assistant + One Digital Farm**.

Instead of opening different apps or different chatbots, farmers interact with one intelligent AI assistant while specialized AI services work in the background.

The UI should feel simple, modern, and premium.

Screen 1 – Landing Page

The first page introduces AgriFlow AI.

Includes:

- AgriFlow AI Logo
- Tagline:
"Your Personal AI Farm Manager"
- Short project description
- Features overview
- Get Started button
- Learn More section

Clicking **Get Started** takes the user to Login.

Screen 2 – Login / Sign Up

Users can:

- Login
- Create Account
- Continue with Google

After successful login, users are redirected to the Dashboard.

Screen 3 – Smart Dashboard (Main Screen)

This is the command center of the application.

Instead of displaying many unrelated cards, the dashboard focuses on **today's farm status**.

Dashboard Includes

 Good Morning Farmer

AI Daily Briefing

Example:

- Rain expected after 4 PM
- Irrigation not required today
- Tomato prices increased by 8%
- Disease risk is low
- Fertilizer stock is sufficient

Farm Health Score

Example:

92 / 100

Shows the overall condition of the farm.

Today's Tasks

Examples:

- ✓ Check tomato field
- ✓ Harvest ready
- ✓ Apply fertilizer tomorrow

Smart Alerts

Weather alerts

Disease alerts

Market alerts

Government scheme updates

Floating AI Assistant

Available on every screen.

The farmer can ask questions anytime.

Screen 4 – AI Assistant

There is only **one AI assistant** in the application.

The farmer can:

- Type questions
- Speak using voice
- Upload crop images

Example questions:

"Should I irrigate today?"

"My crop leaves are turning yellow."

"What is today's tomato price?"

"Am I eligible for any government schemes?"

The AI automatically understands the request and contacts the correct backend service.

The farmer never chooses different modules or chatbots.

Screen 5 – My Farm (AI Farm Twin) ★

This is the unique screen of our project.

Every farm has its own digital profile.

Displays:

- Farm Name

- Farm Location
- Crop Details
- Soil Type
- Farm Size
- Current Growth Stage
- Previous Harvest
- Irrigation Method
- Farm Health Score

The AI remembers this information and provides personalized recommendations.

Screen 6 – Farm Insights

Instead of separate weather, irrigation, and market pages, this screen combines all important insights.

Displays:

 Weather Overview

 Disease Risk

 Water Status

 Market Opportunity

 Yield Prediction

Each section includes AI recommendations and suggested actions.

Screen 7 – Farm Timeline

Automatically records every farming activity.

Examples:

- ✓ Rain alert received
- ✓ Irrigation postponed
- ✓ Disease detected

✓ Treatment completed

✓ Harvest completed

✓ Crop sold

This creates a complete digital history of the farm.

Screen 8 – Notification Center

Displays all AI-generated alerts.

Examples:

 Rain expected tomorrow

 High disease risk detected

 Irrigation reminder

 Market price increased

 New government scheme available

Screen 9 – Profile & Settings

Displays:

- Farmer Information
 - Farm Details
 - Preferred Language
 - Notification Preferences
 - AI Settings
-

★ What Makes Our UI Different?

Traditional agriculture apps have multiple disconnected pages and tools.

AgriFlow AI provides:

- One AI Assistant
- One Digital Farm Profile
- One Smart Dashboard
- One Unified Experience

The user never worries about which feature to use.

They simply interact with their AI Farm Manager, while all intelligent workflows happen behind the scenes.

This creates a modern, intuitive, and premium farming experience.
